Section 1 – Project Understanding and Planning (Alicia Espana)

Abstract

Project Description

The purpose of the Gym Membership Tracking System is to help a fitness center efficiently manage and monitor gym member information and membership statuses. The system will maintain records for up to 25 gym members, including essential details such as member identification, names, and membership status.

The software will allow staff members to add, search, display, and update member records while also generating summary reports to help management quickly assess membership activity. By digitizing membership tracking, the gym can reduce errors, improve efficiency, and better manage member services.

Problem Statement

Many fitness centers struggle with manually tracking gym memberships using manual formats or outdated systems. This can result in inaccurate data, lost information, inefficient membership tracking, and difficulty identifying active or inactive members.

The gym requires a reliable system that allows employees to quickly access and manage membership information while maintaining accurate records of membership statuses. Without an organized system, staff may spend unnecessary time searching for records and generating reports manually.

The Gym Membership Tracking System aims to solve these challenges by providing a centralized and organized method for managing member data and tracking membership activity.

Project Goals

The primary goals of the Gym Membership Tracking System are:

- To create an organized system for storing gym member information.
- To manage up to 25 member records efficiently.
- To track membership statuses including:
 - Active
 - Expired
 - Suspended
- To allow staff to quickly search and retrieve member information.
- To enable updates to member membership status.
- To generate a summary report showing:
 - Total Members
 - Active Members
 - Expired Members
 - Suspended Members
- To reduce manual recording keeping and improve operational efficiency.

Expected Inputs

Users of the system will enter the following information:

Member Information

- **Member ID**
A unique identification number assigned to each current/new gym member.
- **Member Name**
The full name of the gym member.
- **Member Phone Number**
The best contact number for the gym member.

- **Member E-mail Address**

The preferred e-mail address for the gym member.

- **Member Address**

The current address for the gym member.

- **Member Birthday**

The date of birth of the gym member.

- **Membership Status**

The current membership condition of the member.

Membership Status Values

Users will select one of the following status options:

- **Active** - Member has an active membership.
- **Expired** - Membership period has ended.
- **Suspended** - Membership has been temporarily paused or restricted.

The system will also allow staff to update member information and search current records.

Expected Outputs

The Gym Membership Tracking System will generate and display the following outputs:

Member Record Information

The system will display individual member details including:

- Member ID
- Member Name
- Member Phone Number
- Member E-mail Address

- Member Birthday
- Membership Status

Search Results

When searching for a member, the system will display matching member records.

Membership Record Display

The system will display all member records currently stored in the system.

Summary Report

The system will generate a summary report containing:

- Total Members
- Number of Active Members
- Number of Expired Members
- Number of Suspended Members

These outputs will help gym staff monitor memberships and make informed decisions regarding member management.
